

Why Domestic Solar PV?

Installing Solar PV in your home can provide the following benefits:

- Cut your carbon footprint: solar electricity is green, renewable energy and doesn't release any harmful carbon dioxide (CO₂) or other pollutants. A typical home PV system could save around 1tonne of CO₂ per year - that's around 25 tonnes over its lifetime.
- Cut your electricity bills: sunlight is free, so once you've paid for the initial installation your electricity costs will be greatly reduced. A typical home PV system can produce around 40% of the electricity a household uses in a year.
- Sell electricity back to the Grid: if your system is producing more electricity than you need, or when you can't use it, someone else can use it - and you could make a bit of money.
- Store electricity for a cloudy day: if your home isn't connected to the national grid you can store excess electricity in batteries to use when you need it.

Why Commercial Solar PV?

Installing Solar PV in your commercial premises can provide the following benefits:

- Asset Value Improvement
- Revenues from Power Generation and Grid Export via Feed-in-Tariffs
- Reduced Electricity Costs and Improved Certainties in Operating Expenses
- Enhanced Capital Allowances (ECAs)
- Energy Performance Certification Grade Improvement
- Improvement in Environmental and Sustainability Performance
- Alignment with Carbon Reduction Commitment Allowance Strategy
- Corporate Social Responsibility Agenda, BREEAM / LEED Certification Process
- Proof of Concept
- PR, Marketing and Editorial Opportunities

Who are PV Carbon Savings?

- The installation cost of commercial Solar PV can be prohibitive, particularly in the current economic climate.
- We are uniquely able to offer a solution that can help commercial organisations to achieve their 'green' targets with no capital outlay.
- **PV Carbon Savings** is a funding body providing up to 100% grants towards the installation of state of the art Solar PV technology in a commercial setting.
- By installing a Solar PV system grant-assisted by PV Carbon Savings, we can make the process of becoming a 'green' recognised organisation less costly, whilst at the same time improving energy efficiency and helping to reduce carbon emissions.

Who are Premier Energy Solutions?

- Award-winning energy solutions provider, founded 1998, based in Greater Manchester
- One stop shop for domestic and commercial energy efficiency measures
- Mission to be the most recommended Energy Solutions Company in the North of England
- Providing Gas, Electrical, Plumbing, Solar PV, Solar Thermal, Heat Pump, Heat Recovery, Cavity Wall and Loft Insulation, Draught Proofing, Solid Wall Insulation
- Supplying Central & Local Government, ALMOs, consortia, housing associations energy suppliers, main contractors, manufacturers, business and general public
- Directly employing over 100 professionals from the local community & providing sustainable opportunity for local people, particularly under-represented
- Envious reputation for safety, quality, service, training and innovation. ISO9001, Investors in People, Construction Health & Safety (CHAS) Accredited

Our Commitment to Quality and Value for Money

- We have developed over the years into a company that takes its responsibilities seriously.
- We have developed processes that we operate internally and externally, this ensures we deliver best quality products to our customers in the most cost effective way.
- Recognition of our processes has been promoted at the highest levels nationally.
- We were announced as national CORGI Installer of the Year in 2008-09. We also won the Society of British Gas Industries (SBGI) Company of the Year 2009-10, which was especially pleasing as we were up against the likes of BP, British Gas, National Grid and E.On.
- We are especially proud to be announced as a 'green' national company of the year finalist in 2010-11.

We would be delighted to come and meet with you to discuss your needs and design a system that helps you achieve your 'green' objectives.
